Mathematical Biosciences

Mathematical Biosciences is abstracted or indexed in Applied Mechanics Review, Biological Abstracts, CABS/ Current Awareness in Biological Sciences, Chemical Abstracts, Current Contents, Engineering Index, Excerpta Medica, INSPEC, International Abstracts of Biological Sciences, Mathematical Reviews, and Medicus/ MEDLINE.

Volume 164

J.H. Roberds and J.F. Selgrade, Dynamical analysis of density-dependent selection in a discrete one-island migration model 1

T.L. Jackson and H.M. Byrne, A mathematical model to study the effects of drug resistance and vasculature on the response of solid tumors to chemotherapy 17

J. Müller, M. Kretzschmar and K. Dietz, Contact tracing in stochastic and deterministic epidemic models 39

S.R.-J. Jang and J. Baglama, Qualitative behavior of a variable-yield simple food chain with an inhibiting nutrient 65

A. McKenzie and M. Steel, Distributions of cherries for two models of trees 81

C. Lee, The density of the extinction probability of a time homogeneous linear birth and death process under the influence of randomly occurring disasters 93

S. Cui and A. Friedman, Analysis of a mathematical model of the effect of inhibitors on the growth of tumors 103

V. Choulakian and S. Mahdi, A new statistic for the analysis of association between trait and polymorphic marker loci 139

P. Sun and X.B. Yang, Dynamic behaviors of the Ricker population model under a set of randomized perturbations 147

M. van Boven, H.E. de Melker, J.F.P. Schellekens and M. Kretzschmar, Waning immunity and sub-clinical infection in an epidemic model: implications for pertussis in The Netherlands 161

C.M. Kribs-Zaleta and J.X. Velasco-Hernández, A simple vaccination model with multiple endemic states 183

K. Hasík, Uniqueness of limit cycle in the predator–prey system with symmetric prey isocline 203
